

SAFETY Training

Basic Workers' Comp & Claims Management

Protocols associated with workers' comp claims management are common. There is significant importance in handling a claim correctly from start to finish that every professional should know. This training will provide information in properly handling a claim and answer questions pertaining to the claims process.

Who should attend?

Safety management, field management (foremen/superintendents) project management, executive management will benefit by gaining this fundamental understanding of the workers' comp claims management process. Even if attendees never have a direct role in managing a claim, this class will provide a deeper understanding of the claim process and a more holistic view of a company's business model.

You will learn:

- When is an injury compensable?
- Completing the First Report of Injury form
- Reading a DWC 20 Uniform Treatment Status Reporting form
- Completing an Average Weekly Wage form
- Defining a medical only claim
- Communicating with a claimant
- Eligibility for indemnity payments
- Calculating indemnity payments
- Compensation calculation related to alternative employment
- Reaching maximum medical improvement
- Understanding impairment ratings
- Considerations related to a one-time change
